

Oracle® Database

Release Notes

11g Release 2 (11.2) for HP-UX

E23561-02

October 2011

This document contains important information that was not included in the platform-specific or product-specific documentation for this release. This document supplements *Oracle Database Readme*.

This document may be updated after it is released. To check for updates to this document and to view other Oracle documentation, refer to the Documentation section on the Oracle Technology Network (OTN) Web site:

<http://www.oracle.com/technetwork/indexes/documentation/index.html>

This document contains the following topics:

- [Certification Information](#)
- [Latest Upgrade Information](#)
- [Unsupported Products](#)
- [Content Specific to Oracle Database 11g Release 2 \(11.2.0.1\)](#)
- [Content Specific to Oracle Database 11g Release 2 \(11.2.0.2\)](#)
- [Content Specific to Oracle Database 11g Release 2 \(11.2.0.3\)](#)
- [Documentation Accessibility](#)

1 Certification Information

The latest certification information for Oracle Database 11g Release 2 (11.2) is available on My Oracle Support (formerly *OracleMetaLink*) at:

<https://support.oracle.com>

Bash Support

Bash is not supported on HP-UX Itanium.

2 Latest Upgrade Information

For late-breaking updates and best practices about preupgrade, postupgrade, compatibility, and interoperability discussions, refer to Note 785351.1 on My Oracle Support (formerly *OracleMetaLink*) that links to the "Oracle 11gR2 Upgrade Companion" page.

<https://support.oracle.com>

3 Unsupported Products

A list of unavailable features and products is available in Section 2, "Features Not Available or Restricted in This Release," in *Oracle Database Readme*.

In addition to the items listed in Section 2, "Features Not Available or Restricted in This Release," in *Oracle Database Readme*, the following products or features are not supported:

- Oracle ACFS replication and tagging
- Oracle ACFS security and encryption

Database Smart Flash Cache Support

Database Smart Flash Cache is supported on Solaris and Oracle Linux only. For release 11.2.0.1 on Oracle Linux, you must install the 8974084 patch.

Oracle Automatic Storage Management Dynamic Volume Manager Support

Oracle ACFS and Oracle ADVM are not supported.

Oracle ODBC Driver Support

Oracle ODBC driver is not supported on HP-UX PA-RISC.

ASMLIB Support

ASMLIB is not supported on HP-UX.

4 Content Specific to Oracle Database 11g Release 2 (11.2.0.1)

The following content is specific to release 11.2.0.1:

- [Preinstallation Requirements for Release 11.2.0.1](#)
- [Installation, Configuration, and Upgrade Issues for Release 11.2.0.1](#)
- [Other Known Issues for Release 11.2.0.1](#)

4.1 Preinstallation Requirements for Release 11.2.0.1

Refer to the installation guides for the preinstallation requirements.

4.2 Installation, Configuration, and Upgrade Issues for Release 11.2.0.1

Review the following sections for information about issues that affect Oracle Database installation, configuration, and upgrade:

- [Oracle Automatic Storage Management Configuration Assistant Fails While Installing Oracle Grid Infrastructure on a Standalone Server](#)

4.2.1 Oracle Automatic Storage Management Configuration Assistant Fails While Installing Oracle Grid Infrastructure on a Standalone Server

If `ASM_DISKSTRING` attribute is set to the default empty " " string and if there is more than one path to the disk, then Oracle Automatic Storage Management fails to detect the disks while installing Oracle Grid Infrastructure on a standalone server. The following error message appears:

```
ORA-15020: discovered duplicate ASM disk "HPISIHA_0000"
```

Workaround:

Use the command `srvctl modify asm -d diskstring` to set the `ASM_DISKSTRING` attribute to a valid directory path. You may also change the permission on the directory path of the devices in such a way that all the disks are accessed from the same directory path.

This issue is tracked with Oracle bug 9117353.

4.3 Other Known Issues for Release 11.2.0.1

The following section contains information about issues related to Oracle Database 11g and associated products:

- [Help Files Translation Issue for Spanish and French](#)
- [Incorrect Reverse Ping Command from Oracle Management Service](#)
- [Help Pages Fail to Load for Oracle Database Client \(32-Bit\)](#)
- [SQL Developer Fails to Start](#)

4.3.1 Help Files Translation Issue for Spanish and French

Oracle Universal Installer does not copy the translated help files to Oracle home directory when you select the Spanish or French language.

Workaround:

On the Select Product Languages page, select both the Latin American Spanish and Spanish to get the help files translated in Spanish; and select both the Canadian French and French for the translated help files in French.

This issue is tracked with Oracle bug 9147106.

4.3.2 Incorrect Reverse Ping Command from Oracle Management Service

Oracle Management Service provides incorrect reverse ping command with Oracle Enterprise Manager Database Control. The `emoms.properties` file shows:

```
emdrep.ping.pingCommand=/usr/sbin/ping <hostname>
```

Workaround:

Change the property in the `emoms.properties` file to:

```
emdrep.ping.pingCommand=/usr/sbin/ping <hostname> -n 3 -m 30
```

Note: On all the computers using IPv6, you must specify `ping6` command (or an equivalent IPv6 command) instead of `ping` command.

This issue is tracked with Oracle bug 9211800.

4.3.3 Help Pages Fail to Load for Oracle Database Client (32-Bit)

Oracle Universal Installer does not find the `clientinstaller_help.map` file and fails to load the help pages for locales other than English.

Workaround:

Set `LANG=C` before running Oracle Universal Installer. This changes the installer locale to English and the help content is available.

This issue is tracked with Oracle bug 9474214.

4.3.4 SQL Developer Fails to Start

After you install the Oracle Database, the SQL Developer might fail to start and the following error message appears:

```
/bin/bash: bad interpreter: No such file or directory
```

Workaround:

Open the `sqldeveloper.sh` file in a text editor and change `#!/bin/bash` to the actual location of Bash. For example:

```
#!/usr/local/bin/bash
```

This issue is tracked with Oracle bug 9335876.

5 Content Specific to Oracle Database 11g Release 2 (11.2.0.2)

The following content is specific to release 11.2.0.2:

- [Preinstallation Requirements for Release 11.2.0.2](#)
- [Installation, Configuration, and Upgrade Issues for Release 11.2.0.2](#)
- [Other Known Issues for Release 11.2.0.2](#)

5.1 Preinstallation Requirements for Release 11.2.0.2

Refer to the installation guides for the preinstallation requirements.

5.2 Installation, Configuration, and Upgrade Issues for Release 11.2.0.2

Review the following sections for information about issues that affect Oracle Database installation, configuration, and upgrade:

- [Relinking Fails on 32-Bit Client Installations](#)
- [Logical Volume Manager Issue](#)
- [Owner and Group Permissions Issue with Database Upgrade](#)
- [Network Connection Issue Between Nodes in a Cluster](#)
- [Performance Statistics Issue with Oracle Enterprise Manager Database Control](#)

5.2.1 Relinking Fails on 32-Bit Client Installations

Relinking fails on 32-bit client installations because the relink script tries to load 64-bit libraries.

Workaround:

After installation, manually remove the `-d64` flag from `JRE_MEMORY_OPTIONS` in the `$ORACLE_HOME/oui/oraparam.ini` file.

This issue is tracked with Oracle bug 10027801.

5.2.2 Logical Volume Manager Issue

Oracle Automatic Storage Management Configuration Assistant attempts to filter out disks that are in use by the operating system's logical volume manager (LVM). The mechanism used to check the character device files from their default location, `/dev/rdisk/*`, may fail if the Oracle grid user does not have read permissions on the corresponding block device. In rare cases, that failure can result in Automatic Storage Management Configuration Assistant creating an Oracle ASM disk group on top of an existing LVM volume group, corrupting the LVM content.

Note: There is no risk of this failure if the character device files referenced by Oracle ASM have been created in an alternate location. For example:

```
/gridbase/asmdisks
```

Workaround:

On servers where the system administrator has explicitly granted read/write access to any `/dev/rdisk/*` files for use by Oracle ASM, enable read permissions on the corresponding block device. The ownership of the block device need not be changed. For example, if disk11 is available to Oracle ASM, a listing of the device files for that disk usually shows the following:

```
$ ls -l /dev/*disk/disk11
brw-r----- 1 bin      sys          5 0x000001 Apr 21 2009 /dev/disk/disk11
crw-rw---- 1 grid     oinstall 132 0x00001c Apr 21 2009 /dev/rdisk/disk11
```

As the root user, enable read access to the block device with the following command:

```
chmod a+r /dev/disk/disk11
```

This results in:

```
$ ls -l /dev/*disk/disk11
brw-r--r-- 1 bin      sys          5 0x000001 Apr 21 2009 /dev/disk/disk11
crw-rw---- 1 grid     oinstall 132 0x000001 Apr 21 2009 /dev/rdisk/disk11
```

This issue is tracked with Oracle bug 9956769.

5.2.3 Owner and Group Permissions Issue with Database Upgrade

When you upgrade from Oracle Database release 10.x or 11.1 to 11.2 release using the Oracle ASM discovery path, `/dev/rdisk/*` as default, ensure that the corresponding `/dev/rdisk*` disks use the same owners and group permissions as the legacy device special file, `/dev/rdisk/*` disks. Otherwise, the database may fail to start.

Run the following command to map the legacy device special file disks and persistent device special file disks:

```
ioscan -m dsf
```

Based on the mapping result, change the permissions in the corresponding persistent device special file disks.

This issue is tracked with Oracle bug 10148343.

5.2.4 Network Connection Issue Between Nodes in a Cluster

When installing Oracle Grid Infrastructure for a Cluster, the `root.sh` script fails on the second node with the following errors in the `ocssd.log`:

```
CSSD][105]clssnmLocalJoinEvent: takeover aborted due to cluster member node found
on disk
CRS-5818:Aborted command 'start for resource: ora.cssd 1 1' for resource
'ora.cssd'
```

Solution:

Servers with the latest 10 Gigabit Ethernet adapter require revision B.11.31.1009.01 or later of the 10GigEthr-02 software bundle.

Run `swlist 10GigEthr-02` command to identify the current version on your HP server. If it is older than the above mentioned version, then enter 10GigEthr-02 in the Search field and download the latest software from the HP site:

<https://h20392.www2.hp.com/portal/swdepot/index.do>

This issue is tracked with Oracle bug 10175794.

5.2.5 Performance Statistics Issue with Oracle Enterprise Manager Database Control

The summary chart on the Oracle Enterprise Manager Cluster Performance page does not show any data.

Workaround:

Perform the following steps:

1. Stop Oracle Enterprise Manager Database Control.
2. Add the following to the properties file, `$ORACLE_HOME/host_dbunique/sysman/config/emoms.properties`:
`oracle.sysman.db.rac.useRemoteCollection=false`
3. Restart the Oracle Enterprise Manager Database Control

This issue is tracked with Oracle bug 10129539.

5.3 Other Known Issues for Release 11.2.0.2

The following section contains information about issues related to Oracle Database 11g and associated products:

■ [SQL Developer Fails to Start](#)

5.3.1 SQL Developer Fails to Start

After you install the Oracle Database, the SQL Developer might fail to start and the following error message appears:

```
/bin/bash: bad interpreter: No such file or directory
```

Workaround:

Open the `sqldeveloper.sh` file in a text editor and change `#!/bin/bash` to the actual location of Bash. For example:

```
#!/usr/local/bin/bash
```

This issue is tracked with Oracle bug 9335876.

6 Content Specific to Oracle Database 11g Release 2 (11.2.0.3)

The following content is specific to release 11.2.0.3:

- [Preinstallation Requirements for Release 11.2.0.3](#)
- [Installation, Configuration, and Upgrade Issues for Release 11.2.0.3](#)
- [Other Known Issues for Release 11.2.0.3](#)

6.1 Preinstallation Requirements for Release 11.2.0.3

Refer to the installation guides for the preinstallation requirements.

6.2 Installation, Configuration, and Upgrade Issues for Release 11.2.0.3

Review the following sections for information about issues that affect Oracle Database installation, configuration, and upgrade:

- [SEMMNU Kernel Parameter Issue During Oracle Grid Infrastructure Installation](#)
- [Oracle Grid Infrastructure Upgrade Fails with Oracle ASM Upgrade](#)
- [Permission Issues with Oracle Cluster Registry](#)
- [Fixup Script Does Not Set maxssiz_64bit Kernel Parameter](#)

6.2.1 SEMMNU Kernel Parameter Issue During Oracle Grid Infrastructure Installation

During an Oracle Grid Infrastructure installation, if you are prompted to run the `runfixup.sh` script to adjust the value of the SEMMNU kernel parameter, you might see the following error message:

```
NOTE:      The requested changes could not be applied to the currently
           running system, for the following reasons:
           - The tunable 'semmnu' cannot be changed without a reboot.
           * The requested changes have been saved, and will take effect at
             next boot.
```

Workaround:

Set the value of SEMMNU to an appropriate value before installation, or ignore the error message and continue the installation. After the installation completes, restart the server to implement the kernel parameter change.

This issue is tracked with Oracle bug 12811986.

6.2.2 Oracle Grid Infrastructure Upgrade Fails with Oracle ASM Upgrade

When attempting to upgrade to Oracle Grid Infrastructure 11.2.0.2 or 11.2.0.3 from Oracle ASM from version 11.1.0.7, if you choose to upgrade Oracle ASM during the Oracle Grid Infrastructure upgrade and the Oracle ASM 11.1.0.7 installation is owned by a different user than the Oracle Clusterware installation, the upgrade fails.

Workaround:

Change the working path to the new Grid Infrastructure home created by the upgrade attempt.

Run the following command to manually upgrade the Oracle ASM installation:

```
Grid_home_for_11_2/bin/asmca
```

This issue is tracked with Oracle bug 12741662.

6.2.3 Permission Issues with Oracle Cluster Registry

When the Cluster Verification Utility performs the OCR Integrity check, the sharedness check might fail due to the user not having the permission to access the device used for the Oracle Cluster Registry. The error might look similar to the following:

```
PRVF-4172 : Check of OCR device "device_used_for_OCR" for sharedness
failed Could not find the storage
```

Workaround:

Check the permissions of the device identified in the error message, *device_used_for_OCR*. While logged in as the root user, grant the user permission to access the device.

This issue is tracked with Oracle bug 10064738.

6.2.4 Fixup Script Does Not Set maxssiz_64bit Kernel Parameter

The `fixup.sh` script does not set the kernel parameter, `maxssiz_64bit`, to a minimum value required for the successful database installation.

Workaround:

Run the following command as the root user to tune the parameter:

```
# /usr/sbin/kctune maxssiz_64bit=1073741824
```

This issue is tracked with Oracle bug 12746701.

6.3 Other Known Issues for Release 11.2.0.3

No known issues at this time.

7 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.
